Database:	l:em_estl

Statistics: Mean 11.733; Variance 2.670; scale 4.395

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

by prepn of single stranded template, annealing a primer, elongation,
misincorporation, completion of molecules and screening.

Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of
E.coll beta galactosidase. The wild type sequence was obtained as a
single stranded template and an oligonucleotide was hybridised to
it to generate a popn of DNA molecules which terminate at all
possible nucleotide positions within a specified region. The
variable 3' ends generated in this way are used as primers for
reverse transcriptase. Nucleotides are misincorporated by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0; Gaps

                                                                                                                                                                                                                                                                                                                                                                            Oligonuclectide probe MK14.A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

designed so that the expressed peptide contains 1 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Another than 15 and 15

A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide specific for the human endothelin-1, targeted at the initiation codon. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper-reactive airways. Sequence 178 BP; 0 A; 52 C; 46 G; 32 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        105 cbbgccbcbbbcbgcbgbgbgbbbtcbtgbgcbbttbttccbttctgbbbbbbgggbt 164

TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                        Gaps
single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which occurred singularly in any given mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /*tag= a

Tidentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins

PT Generifying a binding domain and an effector domain

Disclosure; Page 35; 255pp; English.

COMPACTS is a generic DNA Sequence used to generate random TSAR (Totally Disclosure; Page 35; 255pp; English.

COMPACTS is a generic DNA Sequence used to generate random TSAR (Totally COMPACTS) peptides. This generic formula can also be represented as follows: X(NNB) G(TGC)(NNB) 11Z(NNB) 14(TGC)(NNB) 3Y. X

COMPACTS is a generic objection sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.

COCHER Specified further. Other generic sequences are shown in Q70466-68.

COCHER Specified further concatenated by these generic sequences are shown in CR65151-54. TSARs are concatenated by these generic sequences are shown in CR65151-54. TSARs are concatenated by these generic sore peptides, comprising at least two functional regions - a binding domain with CCC definity for a ligand and a second effector peptide portion that is chanically or biologically active. They may further comprise a linker of peptide between the 2 domains. The Oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues. These residues confer some degree of conformation of macromolecules, eg.

CCC that the expressed peptide contains 2 or 4 cysteine residues. The TSARs or compens. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active motety, eg. metal ion, cadioisotope, peptide, toxin or enzyme, to the specific target or on the conformation or an envison and therefore circumvent the need conformation and percentaged and have designed conformation or in vivo antibody conformation. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal artibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                  151 CGGCGCCTGGGGCCCCAGGGCTGGCGGGTGCAGCGCGGGGGACCCGGCGGCTTTCCGC 210

Tidentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins promptising a binding domain and an effector domain bisclosure; Page 35; 255pp; English.

Disclosure; Page 35; 255pp; English.

Comprising a binding domain and an effector domain bisclosure, Page 35; 255pp; English.

Comprising at lanking restriction sites (x is not the same as Y) that are conceptive further. Other generic sequences are shown in 707046-68.

Cont specified further. Other generic sequences are shown in 707046-68.

Contrising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker comprise between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal lon, confirmation the peptide to to the peptide or on the conformation or enzyme, to the specific target or on the

recenting a recombinant vector library expressing fusion proteins recenting a recombinant vector library expressing fusion proteins by comprising a binding domain and an effector domain proteins bisclosure; Page 36; 25pp; English.

O70470 is a generic DNA sequence used to generate random TSAR (Totally C70470 is a generic DNA sequence used to generic formula can also be represented as follows: x(NNB)4(CAC)(NNB)4(CAC)(NNB)8C(NNB)6(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(CAC)(NNB)8C(NNB)8C(CAC)(NNB)8C(NNB)8C(CAC)(NNB)8C(NNB)8C(NNB)8C(CAC)(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB)8C(NNB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process. Sequence 114 BP, 5 A, 10 C; 0 G; 0 T;

6 O70465 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)6(TGC)(NNB)112(NNB)14(TGC)(NNB)3Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in CO40466.88.

6 Other specified further other generic sequences are shown in R65151-54. TSARS are concatenated heterofunctional proteins or peptides.

7 Comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The olloquic peptide portion that is chemically or biologically active. They may further comprise a linker of function and the specifies are also designed to that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues conference and conformational rigidity to the peptides. The TSARS corrections are chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the formational or polyclomal or polyclomal or polyclomal or polyclomal or polyclomal or polyclomal or periodes and therefore circumvent the need for the function of macromolecules, eg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Generic DNA sequence to generate a random TSAR petide library. TSAR: totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process. Sequence 114 BP; 0 A; 2 C; 2 G; 2 T;

Confide is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)1(TGC)(NNB)7(TGC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.

Confidence of the specific peptides generated by these generic sequences are shown in R65151-54. TSARS are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is affinity for a ligand and a second effector peptide portion that is comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is comprised between the 2 domains. The oligonuclectides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. Therefore confers some degree of conformational rigidity to the peptides. The TSARs correctly or biologically active moiety, eg. metal ion, additiver a chemically or biologically active moiety, eg. metal ion, correctly peptide, toxin or enzyme, to the specific target or on the color or peptide in the specific target or on the color or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody complex methods of hybridoma formation or in vivo antibody conformation. The TSARs are easily characterised and have designed activity sequence 114 BP; 0 A; 2 C; 2 G; 2 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1542 CTTGGTGTTCCTGAGGAGCGGCGTTCGTTGTGCCTGGAGCCCCAGAGGCCTGGGGGGCAC 1483

Confering a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)16(TGC)(NNB)12(NNB)16(TGC)(NNB)12. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.

Confers specific peptides generated by these generic sequences are shown in R65151-54. TSARS are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or comprise a chemically or biologically active moiety, eg. metal ion, additiver a chemically or biologically active moiety, eg. metal ion, additiver a chemically or biologically active moiety, eg. metal ion, colling and an also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.

O70470 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generate formula can also be represented as follows: X(NNB)4(CAC)(NNB)4(CAC)(NNB)8Z(NNB)6(CAC)(NNB)8.

CCAC)2(NNB)Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. The peptides generated by this and other generic sequences (Q7041-73) have invariant histidine residues.

Incorporated into variant Sequences. TSARs are concatenated to the reprint a binding domain with affinity for a ligand and a second effector peptide portain with affinity for a ligand and a second effector peptide portain that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion.

C adioisotope, peptide, toxin or enzyme, to the specific target or on the coll. They can also replace the function of macromolecules, eg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2625 CAGCTTGTTCTCCATGTCGCCGTAGCACAGGCTGCAGAGCAGCGTGGAGGATGGAGCC 2566
